THE CHALLENGE

Clovis is one of the fastest-growing cities in California's Central Valley. With rapid expansion comes a flood of planning inquiries, permit lookups, council research, and code questions. Staff were spending hours digging through legacy systems, PDF archives, and meeting minutes to answer routine questions — time better spent serving residents.

THE SOLUTION

Madison AI built a knowledge assistant trained on Clovis's council records, municipal code, financial reports, and permit data. Staff get cited answers in seconds and use the platform's built-in tools for deep research, code lookup, voting record search, and meeting recap.

> "Most vendors sell you software and walk away. Madison AI built our application from our data and has been rigorous about uniting our information. — council records, permits, municipal code, GIS, and more. That foundation is what is required to make AI work in government.

Brett Garvin
IT Supervisor
City of Clovis, CA

WHAT CITY STAFF SEARCH FOR MOST

Council History Research
Staff search past votes, resolutions, and council actions in seconds instead of combing through archived agendas and minutes.

Permit & Zoning Lookup
Answers property, planning, and zoning questions that previously required cross-department calls or manual GIS searches.

Municipal Code Search
Instant lookup of ordinances, building codes, and regulations — replacing hours of manual code browsing with cited answers.

Meeting Minutes & Recaps
AI-generated meeting summaries and searchable minutes help staff track decisions without sitting through hours of recordings.
