THE CHALLENGE

Addison's decades of decisions, council records, budgets, and municipal code were scattered across files and locked in the memories of long-tenured staff. Preparing for council meetings, researching permits, or answering policy questions meant hours of digging through PDFs and legacy systems, pulling staff away from serving the community.

THE SOLUTION

Under the leadership of Hamid Khaleghipour, Executive Director of Internal Services, Addison partnered with Madison AI to securely unite decades of institutional knowledge into a single AI assistant. Staff now instantly research past actions, draft memos and ordinances, anticipate council questions, and look up municipal code in seconds instead of hours.

“By providing access to prior discussion and projects, Madison AI helps them quickly gather background information and executive policies on the items they’re working on. **This is significant time savings and lots of positive feedback.**”
